TITLE : DEVICE FOR LEARNING PRONUNCIATION OF FOREIGN LANGUAGE AND
RECORDING MEDIUM WHERE DATA FOR LEARNING FOREIGN LANGUAGE
PRONUNCIATION ARE RECORDED

ABSTRACT : PROBLEM TO BE SOLVED: To provide a device for learning pronunciation of a foreign language and a recording medium where data for learning foreign language pronunciation are recorded, permitting to comprehensibly recognize a failure of own pronunciation, and effectively learn pronunciation and hearing of a foreign language.

SOLUTION: This device stores words containing various phonetic symbols targeted for learning their pronunciations, phrases containing these words, and sentences containing these phrases as model pronunciation data, and outputs the pronunciations in this order. Next, being changed over to a recording mode, the device records voice sound of the sentences by a learner, and alternately outputs the model pronunciation data and the voice sound by the learner. Thus, since the learner can objectively compare own pronunciations with the model pronunciation data by listening to them, he/she can easily recognize own failure at the time of pronouncing them, and expect a rapid progress by overcoming the failure.
